

# ONERugged Key Mapper

ONERugged Key Mapper is a tool for customizing key functions. With simple operations, you can directly map and bind physical keys of an Android device to application services, to facilitate the operation of various functions. It is easy to use and has great compatibility.

Add key mappings in a few steps

Automatically scan device's application services

Press the key to trigger the shortcut operation

Directly import or export software configuration

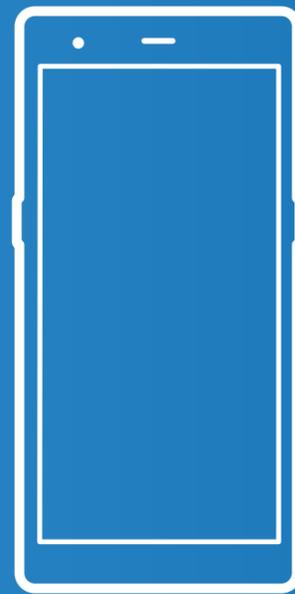

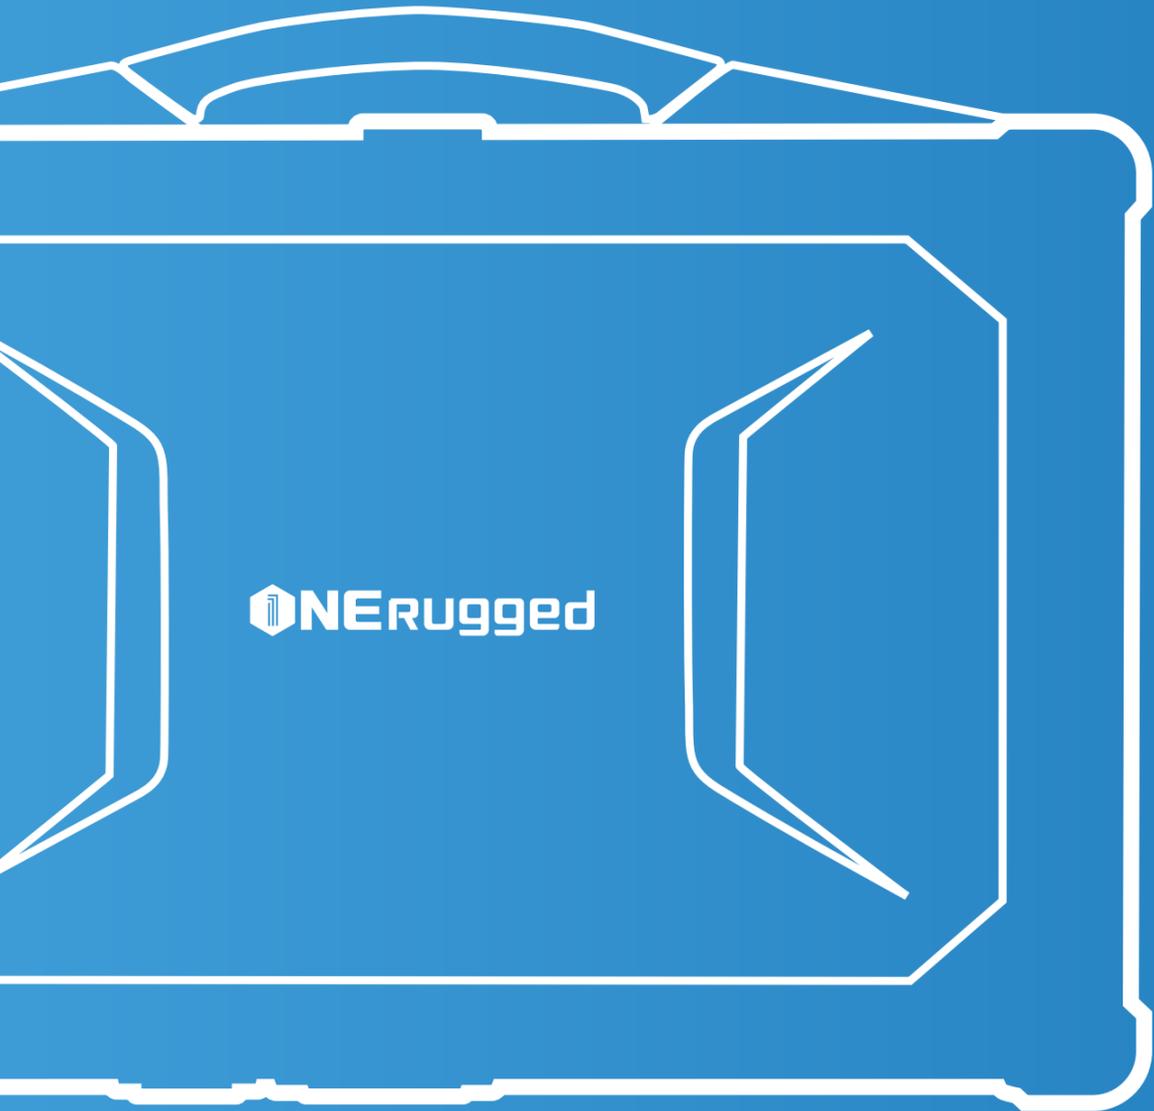

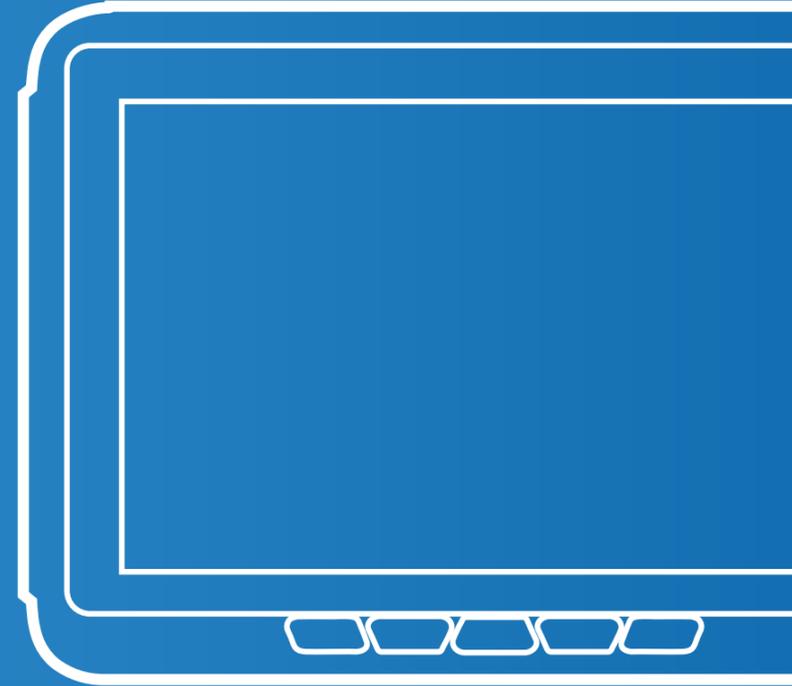

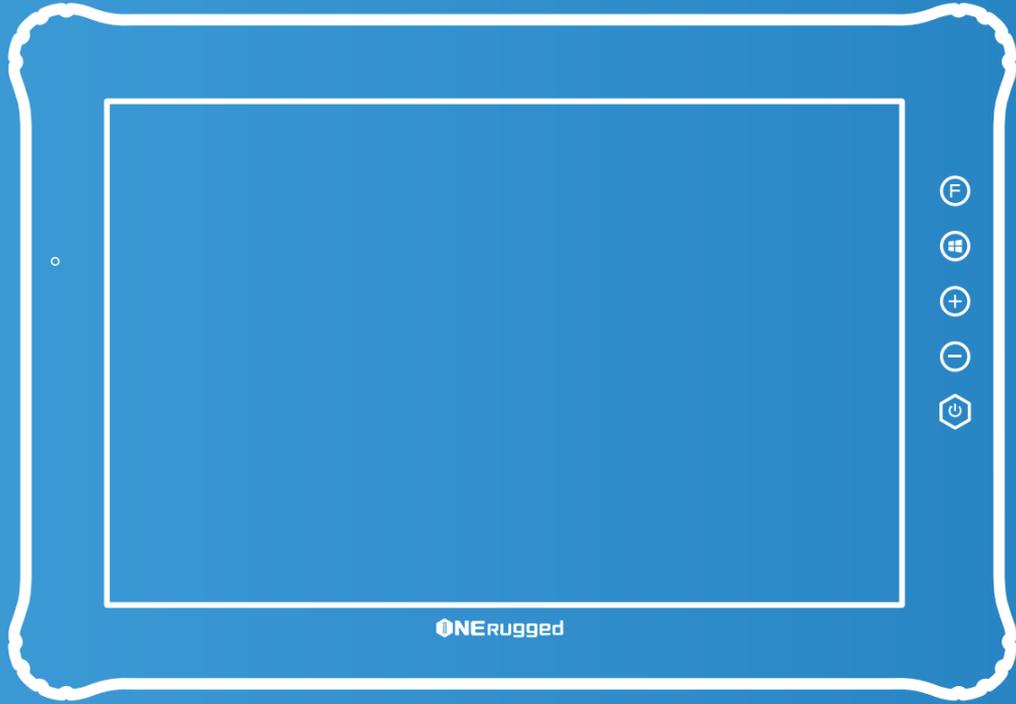

- Works with all Android models of ONERugged.
- Supports custom volume key, return key, Home key, and other key functions.
- Supports four different operation modes: click (press), click (lift), double click, and long press.
- Supports operations such as triggering screenshots and code scanning by keys.
- Wakes up installed applications on the device by keys
- Wakes up existing shortcuts of the devices.
- Wakes up the preset broadcast of the devices.
- Import and export software configurations to facilitate mass deployment.
